

SINCE 1923, WE'VE BUILT THE

When a piece of machinery lasts as long as a Gravelly, people have plenty of time to talk about it.

That's how legends are born. And year after year, every time Gravelly owners start their tractors, the legend lives on.

Gravelly's famous all-gear direct drive with no belts to slip, break, or wear out.

That's because we build Gravellys to last. And not just for a few seasons. So finding somebody still plowing with a '49 convertible Gravelly or mowing with a '67 riding Gravelly isn't unusual.

Besides building our lawn and garden tractors to last, we also build them to do most anything that has to be done in the lawn and garden. With the right attachments, you and your Gravelly can mow, plow, till, cultivate, haul,

seed, remove snow, spray, aerate, thatch, split logs, bag debris, and more.

#### **ONE TRACTOR FOR MANY JOBS**

You see, every Gravelly is a self-propelled power source for over 20 lawn and garden attachments. Which means you invest in one tractor that powers nearly every attachment. And most attachments are compatible with old or

new Gravelly convertible or riding tractors.

This protects your investment since it doesn't matter if your tractor is a 1947 model or a shiny new one.

#### **A POWERFUL ALL-GEAR DRIVE**

All-gear direct drive from engine through the transmission to attachments transmits engine power efficiently. And because it's all-gear, there

are no belts that can slip, wear out or just plain break. The gears are precision cut and run in an oil bath, so friction is reduced to a minimum.

And precision bearings will keep the gears turning much longer.

Every Gravelly riding or convertible tractor comes with a differential much like a car's. So maneuvering your tractor is no more trouble
