

# MOWING

Gravely offers a wide variety of mowing attachments to fit every mowing need from fine lawn to rough. You choose the mower to fit your particular needs.

## 40" AND 50" THREE-BLADE ROTARY MOWERS

Use the 40" mower for wide, even mowing. Or, if you want to cover more territory in less time, use the 50" version.

Both have three hi-lift blades that cut clean, while the steel mower deck follows ground contour for a smooth cut. Big caster wheels help steering and maneuverability. Height adjustment is quick, from 1-1/2" to 3-1/2" in 1/2" increments.

The mower drive is through an aluminum die-cast right angle gear box, bevel gears and tapered roller bearings. The box is driven by a telescoping universal from the tractor PTO. The single horizontal, spring-tensioned "V" belt drives 1" spindles which turn on tapered roller bearings in cast iron spindle housings. The deck is made of 12 gauge, deep drawn steel.

All the Gravely convertible tractors—8, 10 and 12 hp—work with the 40" mower. However, the 50" mower is recommended equipment only for the 10 and 12 hp tractors.

With the Quick Hitch Pin Kit, attaching is simple. Just "drive into" the mower and connect the universal to the PTO.

## 40" TWO-BLADE ROTARY MOWER

When you have a large lawn or rough ground to mow, and you want to do it fast, you'll like the ruggedness of our 40" two-blade rotary mower.

Originally designed for commercial users, this mower is definitely constructed for a long life. It has a right angle cast iron gear box with bevel gears and tapered roller bearings. "V" belts drive all spindles with spring tension belt tighteners.

The unit is mounted on a welded, reinforced steel deck

Top: Gravely 5460, 10 hp Convertible Tractor with 50" Three-Blade Rotary Mower, optional Steering Sulky and Dual Wheels. Center: Gravely 5660, 12 hp Convertible Tractor with 40" Two-Blade Rotary Mower, optional Steering Sulky and Dual Wheels. Bottom: Gravely 5200, 8 hp Convertible Tractor with 30" All-Gear Drive Rotary Mower.

and fits any Gravely lawn and garden tractor. The two hi-lift blades adjust from a 1-1/2" to 4" cutting height in 1/4" increments.

## 30" ROTARY MOWER

Our most legendary mower is the unique and powerful Gravely all-gear drive 30" rotary mower. It mows through the toughest high grass and weeds, undergrowth and deep meadow grass with power to spare. And, it mows your fine lawn as well.

And since it has all-gear drive, there are no belts to slip, break, adjust or replace. Plus, you get the advantage of power directly from the engine to the blade through shafts and gears.

The 30" rotary mower has a right angle bevel gear drive in a cast iron housing with tapered roller bearings. The mower deck is 10 gauge steel. It comes with an anti-scalping roller on the front and replaceable skids.

You have a choice of blades, too. Standard is a 9-pound, 3/8" thick hi-lift blade that takes to lawn and rough with ease. For fine lawn mowing, an optional set of twin, 1/4" hi-lift blades locked at a 90° angle gives you an extra smooth cut.

## 42" SICKLE MOWER

Tackle roughs and forage crops with our sickle mower. It has a steel shaft and universal drive with no belts for positive cutting action. The 42" bar swivels to follow the ground contour. Reinforced with four skids to keep the bar rigid.

The sickle mower has a universal drive with tapered roller and ball bearings fully enclosed in a cast iron housing. 3" knife sections.

## STEERING SULKY

Attach Gravely's optional steering sulky and go along for the ride while the tractor does the work. It's great for handling the big, wide, open lawns in speed and comfort. Requires dual wheels on tractor. Attaches and detaches easily.
