

From the time you first break ground in the spring until harvest time, Gravelly's riding tractor gardening attachments make gardening easy; keep your garden healthy and productive.

REAR TILLER

You can start a garden, renovate a lawn or loosen soil with Gravelly's powerful rear tiller. It's engineered for the muscle jobs, with heavy-duty universal shaft and chain drive to the enclosed worm gear drive, in a cast iron gear box with precision ball bearings. And no belts to break, wear out, slip or adjust. Reinforced, welded steel construction.

The hydraulic attachment lift gives you exact, easy control. With a 30" swath and a tine diameter of 14", the job moves along fast. And you leave a trackless, smoothly-tilled area behind you.

The Gravelly rear tiller does require a rear PTO kit. We also recommend front wheel weights and/or the weight

Top: Gravelly 8163-T, 16 hp Riding Tractor with all-gear and chain drive Rear Tiller, and optional Front Weight Rack with Weights. Bottom: Gravelly 8123, 12 hp Riding Tractor with all-steel Hauling Cart.

bracket and weights. The tiller is recommended for tractors with hydraulic lift.

ALL-STEEL HAULING CART

Whatever needs moving, the Gravelly hauling cart can move it easily.

Not only is it one of the most useful attachments, it's one of the strongest.

It can carry three or four bales of straw or peat moss. Or, fill it with soil or compost. Bricks, cement bags ladders. Even the kitchen sink.

Hitch it up with the swift-action pin connection. The tailgate is removable, and a pull on the positive latching dump lever releases the body for easy dumping. Heavy gauge steel construction, sleeve bearings, strong axle and pneumatic tires mean long years of smooth rolling service.

So, whether you're fixing up or just cleaning up, the Gravelly cart is one of the most useful attachments you can invest in.
